PROFESSIONAL SUMMARY

Graduate software developer with hands-on experience in Java, Python, JavaScript, Spring Boot, and MySQL through internships and academic projects. Focused on backend development, having used RESTful APIs and database features for real-world applications. Took the lead in sprint coordination and technical planning during group projects, using Trello to delegate tasks and facilitate team synchronization. Quickly picked up new tools like Scala to support backend tasks without delaying project progress.

WORK EXPERIENCE

Assistant Software Engineer (Intern)

July 2023 - August 2024

China Telecom Corporation Limited - Chengdu, China

• Client Service Platform (Backend)

- Designed and encapsulated over 8 reusable backend API functions, improving response consistency and reducing frontend integration effort.
- Developed a Redis-based login verification code system, which passed internal team testing with 20+ simulated login attempts, validating its functionality and security logic.
- Implemented MD5-based hashing for user passwords as part of the login module, ensuring that credentials were securely stored in the MySQL database.
- Conducted testing for 12+ RESTful API endpoints using Postman, identifying and helping fix 5+ parameter mismatches in request and response flows.

• AI Model Marketplace – Add to Cart Module (Backend)

- Designed and structured 4 interrelated MySQL tables—users, products, cart_items, and product_variants to support “Add to Cart” functionality for the AI model platform.
- Handled backend logic for cart insertion across 3 different product types, verifying 100% success rate during internal testing with 30+ simulated add-to-cart requests.
- Collaborated with 2 frontend developers to test and validate real-time UI updates through API response feedback, reducing interface failure rate during testing to 0.

• Blockchain-based Agricultural Traceability Platform (Frontend)

- Identified 6 UI bugs during testing, helping prevent post-release issues that could affect user satisfaction.
- Resolved over 30 frontend errors caused by backend API changes, ensuring stable page functionality.
- Designed 2 user-facing forms on the login pages with integrated validation logic.

SKILLS

Languages & Frameworks: Java, Python, JavaScript, HTML/CSS, Spring Boot, Django, Vue.js

Databases & Tools: MySQL, PostgreSQL, Redis, Git, Postman, Trello

Development Practices: RESTful APIs, Agile/Scrum, Object-Oriented Programming, Unit Testing

Additional Experience: Scala, SBT, Akka, Figma (used in course project)

EDUCATION

MSc: Software Development

September 2024 - September 2025

University of Glasgow - Glasgow, UK

- **Concentrations:** Backend Development, Agile Team Collaboration, Full-Stack Web Projects
- **Relevant Coursework:** Web Development, Software Engineering, Databases
- **Group project:** Led a 5-person team to develop a multiplayer card game using Java. Managed Agile sprints, task coordination, and group discussions to align backend and UI progress under tight timeframes.
